Re: **PSD Permit Application Supplemental Information for Cabrillo Port Project**

Dear Ms. Zoueshtiagh:

On behalf of BHP Billiton LNG International Inc. (BHPB), ENTRIX is submitting the attached responses to your requests for information regarding the subject application. Per our telephone conversations concerning USEPA's completeness review of this PSD permit application for the proposed Cabrillo Port Project, the following documents are provided:

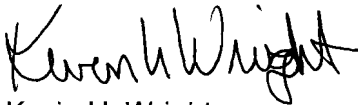

- Construction Operations Emissions Summary (with emission spreadsheets).
- Electronic copy in the form of a compact disc (CD) of the OCD model input and output files and the 1991-1993 pre-processed meteorological data for the project.

The CD has separate sub-directories for each year of meteorological data (e.g., 1991, 1992, and 1993) that further contain sub-directories for each pollutant and averaging period. The overland and overwater meteorological data files for each year are located in the respective 1991 to 1993 subdirectory. OCD input and output files for short-term averaging periods for each pollutant (e.g., CO, SO₂, NO₂, and PM₁₀) are contained in separate directories under each year. Long-term (annual) averaging period input and output files are contained in separate directories under each year for the pollutants with an annual ambient air quality standard (e.g., SO₂, NO₂, and PM₁₀). The names of the long-term average pollutant sub-directories are as follows: SO₂LONG, NO₂LONG, and PM₁₀LONG.

Should you have any questions concerning this response to your request for information, please contact me at (805) 477-5007.

Sincerely,

ENTRIX, INC.

Kevin U. Wright
Senior Project Scientist
